DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Hewes (US 4,049,057).

The claimed structure reads exactly on the reference's structure when members (42), (54), and (46) of Hewes are respectively considered as “housing”, “end connections” and “reclosable pressure relief valve” as recited.

Claim Rejections - 35 USC § 103

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claims 2, 17 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hewes '057 in view of Mundt (US 3,292,708) or Thornton (US 2003/0164236).

Hewes '057 discloses the invention as claimed except for blade(s) on the external surface of the housing. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the housing or tubing Hewes such blades as claimed because either Mundt or Thornton teaches providing a downhole tubular with a centralizer including such blades in order to maintain the tubular centered, stabilized or protected (see figures 1 and 2 in Mundt and figures 15a and 15b in Thornton).

Response to Arguments

5. Applicant's arguments filed 7/12/2006 have been fully considered but they are not persuasive.

Contrary to applicant's argument, a preamble, an intended use or a functional statement is given no patentable weight in an apparatus claim. Specifically, the following recitations are given no patentable weight: "for relieving trapped annular pressure between a plurality of nested casing strings"; "adapted for installation between adjacent nested casing strings" and "adapted to joint adjacent sections of one of the plurality of nested casing strings". With respect to applicant's argument that Hewes is directed to a valve unit located within an eduction tube rather than an apparatus for relieving annular fluid pressure between casing strings, it should be noted that the "casing strings" are not parts of the claimed apparatus. Claim 1 would define over Hewes if amended to positively recite the "casing strings" in the body of the claims as components of the claimed apparatus and the housing is mounted in one of the casing strings.

Allowable Subject Matter

6. Claims 3-16 and 19-34 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
